JAVA.IO.PRINTWRITER.PRINT METHOD

 Copyright © tutorialspoint.com

Description

The **java.io.PrintWriter.print** method prints a long integer. The string produced by String.valueOf*long* is translated into bytes according to the platform's default character encoding, and these bytes are written in exactly the manner of the write*int* method.

Declaration

Following is the declaration for **java.io.PrintWriter.print** method.

```
public void print(long l)
```

Parameters

- **l** -- The long to be printed

Return Value

This method does not return a value.

Exception

- **NA**

Example

The following example shows the usage of **java.io.PrintWriter.print** method.

```
package com.tutorialspoint;

import java.io.*;

public class PrintWriterDemo {

   public static void main(String[] args) {
      long i = 4854587375487354l;

      // create a new writer
      PrintWriter pw = new PrintWriter(System.out);

      // print long
      pw.print(i);

      // change the line
      pw.println();

      // print another long
      pw.print(12315436474l);

      // flush the writer
      pw.flush();

   }
}
```

Let us compile and run the above program, this will produce the following result:

```
4854587375487354
12315436474
```
