CSS - TABLE-LAYOUT

 Copyright © tutorialspoint.com

Description

The *table-layout* property determines the layout method used in rendering a table.

Possible Values

- **auto** − The table should be laid out according to some automatic layout algorithm. Browser does this automatically.
- **fixed** − The table should be laid out according to the provided fixed-table layout method.

Applies to

All the elements with a display of table or inline-table.

DOM Syntax

```
object.style.tableLayout = "fixed";
```

Example

NOTE − This property is not supported by many browsers so do not rely on this property.

```
<html>
   <head>
   <body>
      <style type="text/css">
         table.auto {
            table-layout: auto
         }
         table.fixed {
            table-layout: fixed
         }
      </style>
   </head>
      <table >
         <tr>
            <td width="20%">1000000000000000000000000000</td>
            <td width="40%">10000000</td>
            <td width="40%">100</td>
         </tr>
      </table>
      <br />

      <table >
         <tr>
            <td width="20%">1000000000000000000000000000</td>
            <td width="40%">10000000</td>
            <td width="40%">100</td>
         </tr>
      </table>
   </body>
</html>
```

This will produce following result −
