

## HOW AFFILIATE MARKETERS USE KEYWORD COMPETITOR TO DOMINATE THEIR PRODUCT NICHE

Affiliate Marketing is very popular today, besides, it's not difficult. Affiliate marketers sell other people's products online. They allocate a banner of the Company to advertise its products on their site or blog. So, each time a visitor clicks on that banner, he gets to the Company's homepage, buys a product and the affiliate marketer gets paid.

It's clear that an affiliate marketer needs to dominate a specific niche where he or she sells a particular product. In this case we are talking about competition between affiliates who sell one and the same product. Let's consider an example. You are an affiliate who sells product A. You know that your profit depends on the quantity of clicks made by visitors of your site or blog on the Company's banner. How people find your site/blog depends on particular **keywords**. Seems like you need to find out which keyword phrases your competitors are using right now to attract more relevant visitors to their sites/blogs.

Keyword Competitor will help you do it in real time. Not only can you make more money as an affiliate, but also research and monitor your competitors online. You get a double gain.

Keyword Competitor will give you an edge in your search engine marketing business and give your clients an advantage over their competitors. The real time data from Keyword Competitor beats any tool and is much more accurate than the competitors' "keyword spying" tools. You never know when the database was updated last. "Live" data always prevails over the stale one.

I'd like to quote our customer Howard at the end who says that "With Keyword Competitor we have also discovered keywords that we would have never known that we ranked for. And we use that priceless, previously undiscovered data to dominate our client's competition, as well as our own"
