

ASSEMBLY - MEMORY SEGMENTS

We have already discussed the three sections of an assembly program. These sections represent various memory segments as well.

Interestingly, if you replace the section keyword with segment, you will get the same result. Try the following code –

```
segment .text      ;code segment
    global _start  ;must be declared for linker

_start:            ;tell linker entry point
    mov edx,len    ;message length
    mov ecx,msg     ;message to write
    mov ebx,1       ;file descriptor (stdout)
    mov eax,4       ;system call number (sys_write)
    int 0x80        ;call kernel

    mov eax,1       ;system call number (sys_exit)
    int 0x80        ;call kernel

segment .data      ;data segment
msg db 'Hello, world!',0xa ;our dear string
len equ $ - msg    ;length of our dear string
```

When the above code is compiled and executed, it produces the following result –

```
Hello, world!
```

Memory Segments

A segmented memory model divides the system memory into groups of independent segments referenced by pointers located in the segment registers. Each segment is used to contain a specific type of data. One segment is used to contain instruction codes, another segment stores the data elements, and a third segment keeps the program stack.

In the light of the above discussion, we can specify various memory segments as –

- **Data segment** – It is represented by **.data** section and the **.bss**. The **.data** section is used to declare the memory region, where data elements are stored for the program. This section cannot be expanded after the data elements are declared, and it remains static throughout the program.

The **.bss** section is also a static memory section that contains buffers for data to be declared later in the program. This buffer memory is zero-filled.

- **Code segment** – It is represented by **.text** section. This defines an area in memory that stores the instruction codes. This is also a fixed area.
- **Stack** – This segment contains data values passed to functions and procedures within the program.
