Copyright © tutorialspoint.com

Description

background-color sets a solid color for the entire background, including the padding and border background, of an element.

Possible Values

- **color** – Any color value in any valid format.
- transparent

Applies to

All the HTML elements.

DOM Syntax

```
object.style.backgroundColor = "Any value as defined above";
```

Example

```
<html>
<head>
</head>
<body>
  <p style="background-color:yellow;">
    This text has a yellow background color.
  </p>
</body>
</html>
```

This will produce following result –
