Copyright © tutorialspoint.com

Description

background-image defines a pointer to an image resource which is to be placed in the background of an element.

Possible Values

- **uri** – URL of the image.
- **none** – Setting background-image to none means that no background image should be used for matching elements.
- transparent

Applies to

All the HTML elements.

DOM Syntax

```
object.style.backgroundImage = "Any value as defined above";
```

Example

Following is the example which demonstrates how to set the background image for an element.

```
<html>
  <head>
    <style>
      body {
        background-image: url("/css/images/css.jpg");
        background-color: #cccccc;
      }
    </style>
  </head>
  <body>
    <h1>Hello World!</h1>
  </body>
</html>
```

It will produce the following result –
