

## Description

background is a shorthand element used to set background styles for an element.

## Possible Values

background is a shorthand property and stand for the following. This value will vary depending on actual property.

- **background-color** – Sets a solid color for the element's background, padding, and border background.
- **background-image** – Defines the location of an image to be placed in the element's background.
- **background-repeat** – Sets a repeat direction for an image in the element's background.
- **background-attachment** – Sets an attachment state for any images in the element's background.
- **background-position** – Sets a position for the origin image in the element's background.
- **background-clip** – Specifies the painting area of the background images

## Applies to

All the HTML elements.

## DOM Syntax

```
object.style.background = "Value according to the used property";
```

## Example

```
<html>
  <head>
  </head>
  <body>
    <p style="background:url(/images/pattern1.gif) repeat fixed;">
      This parapgraph has fixed repeated background image.
      This parapgraph has fixed repeated background image.
      This parapgraph has fixed repeated background image.
      This parapgraph has fixed repeated background image.
    </p>
  </body>
</html>
```

It will produce the following result –
