Description

sets the width of the bottom border of an element.

Possible Values

- **length** – Any length unit. Length units for this property may not be negative.
- **thin** – A border which is thinner than a border set to medium.
- **medium** – A border which is thicker than a border set to thin, and thinner than a border set to thick.
- **thick** – A border which is thicker than a border set to medium.

Applies to

All the HTML elements.

DOM Syntax

```
object.style.borderBottomWidth = "2px";
```

Example

Following is the example to show all the border width –

```
<html>
  <head>
  </head>

  <body>
    <p style="border-width:4px; border-style:solid;">
      This is a solid border whose width is 4px.
    </p>

    <p style="border-width:4pt; border-style:solid;">
      This is a solid border whose width is 4pt.
    </p>

    <p style="border-width:thin; border-style:solid;">
      This is a solid border whose width is thin.
    </p>

    <p style="border-width:medium; border-style:solid;">
      This is a solid border whose width is medium;
    </p>

    <p style="border-width:thick; border-style:solid;">
      This is a solid border whose width is thick.
    </p>

    <p style="border-bottom-width:4px;
      border-top-width:10px;
      border-left-width: 2px;
      border-right-width:15px;
      border-style:solid;">

      This is a a border with four different width.
    </p>
  </body>
```

```
</html>
```

It will produce the following result –
