Copyright © tutorialspoint.com

Description

Sets an element's right border; value is one or more of a color, a value for border-right-width, and a value for border-style.

Possible Values

Possible value is one or more of a color, a value for border-width, and a value for border-style.

Applies to

All the HTML elements.

DOM Syntax

```
object.style.borderRight = "2px solid red";
```

Example

The border-right property allows you to specify color, style, and width of top lines in one property – Following is the example to show to use all the three properties into a single property.

```
<p style="border-right:4px solid red;">  
    This example is showing shorthand property for border-right.  
</p>
```

This will produce following result –
