

Description

border-spacing sets the distance between cells in a table, assuming that the table is rendered using the separate-borders model.

Possible Values

- **length** – Any length unit. If two values are declared, the first applies to spacing along the horizontal axis, and the second applies to the vertical axis.

Applies to

Elements with a display of table or inline-table.

DOM Syntax

```
object.style.borderSpacing = "2px";
```

Example

Here is the example to show usage of border-spacing:

NOTE – This property does not work in IE 6 or NS 7.

```
<html>
  <head>

    <style type="text/css">
      table.one {
        border-collapse: separate;
        width: 400px;
        border-spacing: 10px;
      }
      table.two {
        border-collapse: separate;
        width: 400px;
        border-spacing: 10px 50px;
      }
    </style>

  </head>
  <body>

    <table >
      <caption>Separate Border Example with border-spacing</caption>
      <tr><td> Cell A Collapse Example</td></tr>
      <tr><td> Cell B Collapse Example</td></tr>
    </table>
    <br />

    <table >
      <caption>Separate Border Example with border-spacing</caption>
      <tr><td> Cell A Separate Example</td></tr>
      <tr><td> Cell B Separate Example</td></tr>
    </table>

  </body>
</html>
```

This will produce following result –
