CSS - BOTTOM

Description

The *bottom* property defines an offset of the bottom edge of an absolutely positioned element from the bottom edge of its positioning context, or the vertical distance which a relatively positioned element will be displaced.

Possible Values

- **length** − A fixed distance from the bottom of the positioning context.

- **percent** − Some percentage of the height of the positioning context, assuming that the height of the context has been set explicitly. If not, then a percentage value for bottom is treated as though it were auto.

- **auto** − Default. Lets the browser calculate the bottom position.

Applies to

All the HTML positioned element.

DOM Syntax

```
object.style.bottom = "2px";
```

Example

Here is the example which shows effect of this property −

```
<html>
   <head>
   </head>
   <body>
      <p style="position:absolute; bottom:100px;">
      This line will be positioned 100px above from the bottom edge of this window.
      </p>
</body>
</html>
```

It will produce the following result −
