

## Description

The *font-style* property determines the use of one of three font faces to be used in the rendering of a given element's text.

## Possible Values

- **normal** – Specifies a normal font face; that is, whatever is the default face for the font in use.
- **italic** – Specifies an italic font face; that is, one which is slanted and in which the characters have been modified to improve legibility in their slanted state.
- **oblique** – Specifies an oblique font face; that is, one which is slanted.

## Applies to

All the HTML elements

## DOM Syntax

```
object.style.fontStyle = "italic";
```

## Example

Here is the example using this property –

```
<html>
  <head>
  </head>
  <body>
    <p style="font-style:italic;">
      This text will be rendered in italic style
    </p>
  </body>
</html>
```

This will produce following result –
