## Description

The *max-height* property is used to set an upper bound on the height of an element.

## Possible Values

- **length** – Any length unit. The element can never have a value for height which exceeds this distance.
- **percentage** – Limits the element's height to be at most this percentage of the height of the containing block.
- **none** – There is no limit to the height of the element.

## Applies to

All the HTML elements except non-replaced inline elements and table elements.

## DOM Syntax

```
object.style.maxHeight = "50px"
```

## Example

Here is the example –

```
<html>
  <head>
  </head>
  <body>
    <p style="width:400px; max-height:10px; border:1px solid red; padding:5px;
margin:10px;">
      This paragraph is 400px wide and max height is 10px
      This paragraph is 400px wide and max height is 10px
      This paragraph is 400px wide and max height is 10px
      This paragraph is 400px wide and max height is 10px
    </p>

    
  </body>
</html>
```

This will produce following result –
