Description

The *:focus* pseudo-class is used to add special effect to an element while the element has focus.

While defining pseudo-classes in a `<style>...</style>` block, following points should be taken care:

- `a:hover` MUST come after `a:link` and `a:visited` in the CSS definition in order to be effective.
- `a:active` MUST come after `a:hover` in the CSS definition in order to be effective.
- Pseudo-class names are not case-sensitive.
- Pseudo-class are different from CSS classes but they can be combined.

Possible Values

- **color** – Any valid color value.

Applies to

Anchor / Link element.

Example

Following is the example which demonstrates how to use *:focus* class to change the color of focused links.

```
<html>
  <head>
    <style type="text/css">
      a:focus {color: #0000FF}
    </style>
  </head>
  <body>
    <a href="/html/index.htm">Click this Link</a>
  </body>
</html>
```

This will produce following link. This will change it color to orange when this link gets focused, then you focus on any other link to see that this color will change when it will lose focus.
