

## Description

The *left* property is used in positioning an element. The *right* property allows you to specify how far the element is offset from the left of its containing block *for absolute positioning*, or from the right of where the element itself would normally have been *for relative positioning*.

## Possible Values

- **length** – A fixed distance from the right of the positioning context.
- **percent** – Some percentage of the width of the positioning context, assuming that the width of the context has been set explicitly.
- **auto** – Default. Lets the browser calculate the left position.

## Applies to

All the HTML positioned element.

## DOM Syntax

```
object.style.right = "2px";
```

## Example

Here is the example which shows effect of this property –

```
<html>
  <head>
  </head>
  <body>
    <p style="position:absolute; right:100px;">
      This line will be positioned 100px away from the right edge of this window.
    </p>
  </body>
</html>
```

It will produce the following result –
