

Description

The *speak-header* property is used in aural media to specify whether table headers are spoken before each cell, or only before each cell if that cell uses a different header to the previous cell.

Possible Values

- **once** – Headers will only be read once.
- **always** – The contents of the header will be spoken as the preface to every related cell in the table.

DOM Syntax

```
object.style.speakHeader = "once";
```

Applies to

All the elements that have table header information.

Example

Here is the example –

```
<style type="text/css">
  <!--
    table {speak-header: once;}
    th.urgent {speak-header: always;}
  -->
</style>
```
