This is a complete reference guide for web developers where we have listed all the CSS properties related to Table defined in the World Wide Web Consortium's Recommended Specification for Cascading Style Sheets, Level 2.

Click any property to see its description with examples –

Property	Description
border-collapse	Sets the table border rendering algorithm.
border-spacing	With separate borders set the spacing between borders. One value sets vertical and horizontal spacing and two values sets horizontal and vertical spacing respectively.
caption-side	Sets the position for a table caption.
empty-cells	With separate borders, hides empty cells in a table.
table-layout	Determines the table-rendering algorithm.
