

Description

The *text-shadow* property specifies one or more shadows which are derived from the text of an element.

Possible Values

- **none** – No shadows should be associated with the element.
- **color** – Any color value. This gives the color of the shadow.
- **length length length** – The offset distances and blur radius for the shadow, in the order x-offset, y-offset, and blur radius.

Applies to

All the HTML elements.

DOM Syntax

```
object.style.textShadow = "red";
```

Example

Following is the example which demonstrates how to set the shadow around a text. This may not be supported by all the browsers.

```
<html>
  <head>
  </head>
  <body>
    <p style="text-shadow:4px 4px 8px blue;">
      If your browser supports the CSS text-shadow property, this text will have a blue
      shadow.
    </p>
  </body>
</html>
```

This will produce following result –
