Copyright © tutorialspoint.com

Description

The *text-transform* property changes the capitalization of text within an element, or else directs the user agent to leave the capitalization "as is."

Possible Values

- **capitalize** – The first letter of each word in the element's text should be capitalized.
- **uppercase** – All of the characters in the element's text should be uppercase *capital letters*.
- **lowercase** – All of the characters in the element's text should be lowercase.
- **none** - The capitalization of the element's text should not be altered.

Applies to

All the HTML elements.

DOM Syntax

```
object.style.textTransform = "uppercase";
```

Example

Following is the example which demonstrates how to set the cases for a text using text-transform property.

```
<html>
<head>
</head>
<body>
  <p style="text-transform:capitalize;">
    This will be capitalized
  </p>

  <p style="text-transform:uppercase;">
    This will be in uppercase
  </p>

  <p style="text-transform:lowercase;">
    This will be in lowercase
  </p>
</body>
</html>
```

This will produce following result –
