# CSS - VOICE-FAMILY

## Description

The *voice-family* property is used to define the specific voice, and optionally a generic voice type, which is to be used in the speaking of content.

## Possible Values

- **specific-voice** — Any specific voice name may be declared for the voice, although those voice names with whitespace or other special characters in their names should be quoted.

- **generic-voice** — The permitted generic voice family values are male, female, and child.

## Applies to

All the HTML elements.

## DOM Syntax

```
object.style.voiceFamily = "child";
```

## Example

Here is the example —

```
<style tyle="text/css">
   <!--
   h1 { voice-family: announcer, male }
   p.part.romeo  { voice-family: romeo, male }
   p.part.juliet { voice-family: juliet, female }
   -->
</style>
```
