

Description

The *volume* property is used for specifying the median volume of the wave form.

Possible Values

- **number** – Any number in the range 0 - 100.
- **percentage** – Percentage values are calculated relative to the inherited value of volume, and then clipped to the range 0 - 100 if necessary.
- **silent** – No sound should be produced.
- **x-soft** – Equivalent to the numeric value 0.
- **soft** – Equivalent to the numeric value 25.
- **medium** – Equivalent to the numeric value 50.
- **loud** – Equivalent to the numeric value 75.
- **x-loud** – Equivalent to the numeric value 100.

Applies to

All the HTML elements.

DOM Syntax

```
object.style.volume = "50";
```

Example

Here is the example –

```
<style type="text/css">
  <!--
    P.goat { volume: x-soft }
  -->
</style>
```

Paragraphs with class **goat** will be very soft.
