CSS - WIDOWS

Description

The *widows* property is used in paged media to control line breaks by specifying the minimum number of lines in a paragraph that should be left at the top of the page.

Possible Values

- **integer** — Any length unit. Negative length values are not permitted for this property.

Applies to

All the Block level elements.

DOM Syntax

```
object.style.widows = "5";
```

Example

Here is the example to create 4 lines at the bottom and 3 lines at the top of each page −

```
<style type="text/css">
   <!--
   @page{orphans:4; widows:2;}
   -->
</style>
```
