CSS - WORD-SPACING

Description

The *word-spacing* modifies the amount of space placed between words.

Possible Values

- **normal** − The default spacing between words is not changed. In practice, this is equivalent to setting the value to 0.

- **length** − This will add to the spacing between words.the greater the length, the more space will be seen between words.

Applies to

All the HTML elements.

DOM Syntax

```
object.style.wordSpacing = "10px";
```

Example

Following is the example which demonstrates how to set the space between words.

```
<html>
   <head>
   </head>
   <body>
      <p style="word-spacing:5px;">
      This text is having space between words.
      </p>
   </body>
</html>
```

This will produce following result −
