EBXML - SUMMARY

This brief tutorial covered the basics of ebXML and its various elements. We discussed the complete architecture of ebXML and how it provides consistent business semantics and a standard technical infrastructure for business exchanges. In addition, we covered how to put ebXML into use a real example.

From this tutorial we conclude:

- ebXML is a worldwide project to standardize the exchange of electronic business data.

- ebXML is a group of related specifications that covers analysis of Business Processes and Business Documents.

- ebXML is to enable consistent, secure, and interoperable message exchange XML-based infrastructure.

- ebXML is supported by hundreds of industry consortia, standards bodies, companies, and individuals from around the world.
