Guava introduces many advanced collections based on developers' experience in application development works. Given below is a list of useful collections:

Sr.No	Collection name & Description
1	<a href="#"><u>Multiset</u></a> An extension to Set interface to allow duplicate elements.
2	<a href="#"><u>Multimap</u></a> An extension to Map interface so that its keys can be mapped to multiple values at a time.
3	<a href="#"><u>BiMap</u></a> An extension to Map interface to support inverse operations.
4	<a href="#"><u>Table</u></a> Table represents a special map where two keys can be specified in combined fashion to refer to a single value.
