# HTML <ILAYER> TAG

## Description

The HTML <ilayer> tag is used to create a layer that occupies space in the containing text flow. Subsequent content is placed after the space occupied by the <ilayer>.

This is in contrast to the <layer> tag, which creates a layer above the containing text flow, allowing subsequent content to be placed under the layer just created.

## Example

```
<!DOCTYPE html>
<html>
<head>
<title>HTML ilayer Tag</title>
</head>
<body>
This <ilayer top="4">word</ilayer> is shifted down, while
this <ilayer left="10">one</ilayer> is shifted over. With a negative
value, words can be moved <ilayer top="-4">up</ilayer> and to
the <ilayer left="-10">left</ilayer>.
</body>
</html>
```

This will produce following result:

This word is shifted down, while this one is shifted over. With a negative value, words can be moved up and to the left.

The result will only work on Netscape 4.

## Global Attributes

This tag supports all the global attributes described in - **HTML Attribute Reference**

## Specific Attributes

The HTML <ilayer> tag also supports following additional attributes:

| Attribute | Value | Description |
|---|---|---|
| above | layer name | The name of the inline layer that will be positioned directly above the current layer in the z-order. |
| background | URL | A filename or URL for an image upon which the inline layer's text and images will appear. |
| below | layer name | The name of the inline layer that will be positioned directly below the current layer in the z-order. |
| bgcolor | rgb$x, x, x$ #xxxxxx colorname | The color to use for the inline layer background. |
| clip | number | The coordinates of the inline layer's viewable area. |
| height | pixels | The inline layer's height, in pixels. |
| left | number | The position of the left side of the inline layer. If the current inline layer is part of another layer.called the |

|---|---|---|
| | | parent layer-then the position is relative to the parent layer. |
| name | layer name | The name of the inline layer. |
| pagex | number | The position of the left side of the inline layer relative to the browser window. |
| pagey | number | The position of the top of the inline layer relative to the browser window. |
| src | URL | The URL of a page that will appear inside the inline layer. |
| top | number | The position of the top of the inline layer. If the current inline layer is part of another layer--called the parent layer--then the position is relative to the parent layer. |
| visibility | show hide inherit | Determines whether the inline layer is visible. |
| width | pixels | The inline layer's width, in pixels. |
| z-index | number | The inline layer's position within the z-order. Inline layers with higher Z-INDEX values are positioned above inline layers with lower Z-INDEX values. |
