Description

The HTML <label> tag is used to add a label to a form control like text, textarea etc.

Example

```
<!DOCTYPE html>
<html>
<head>
<title>HTML label Tag</title>
</head>
<body>
<label for="email">EMAIL-ID:<br /> <input type="email" value="" name="emailid"
size="30" placeholder="Enter a valid email address"><br /><br />
<label for="phone">PHONE NO:<br /> <input type="text" value="" name="phno" size="30"
maxlength="10" placeholder="Enter a valid phone number" pattern="[0-9]{10}"><br /><br />
</body>
</html>
```

This will produce following result:

EMAIL-ID:

PHONE NO:

Global Attributes

This tag supports all the global attributes described in - [HTML Attribute Reference](#)

Specific Attributes

The HTML <label> tag also supports following additional attributes:

Attribute	Value	Description
form	form_id	It specifies one or more forms the label belongs to
for	control id	Specifies the input control that this label is for. This value must be the same as the value in the input control's "id" attribute.

Event Attributes

This tag supports all the event attributes described in - [HTML Events Reference](#)
