HTML <PRE> TAG

Description

The HTML <pre> tag is used for indicating preformatted text. The code tag surrounds the code being marked up.

Browsers normally render pre text in a fixed-pitched font, with whitespace in tact, and without word wrap.

Example

```
<!DOCTYPE html>
<html>
<head>
<title>HTML pre Tag</title>
</head>
<body>
<pre>
     This text is
 in a fixed-pitch
       font, and it preserves
 both    spaces and line breaks
</pre>
</body>
</html>
```

This will produce following result:

```
     This text is
 in a fixed-pitch
       font, and it preserves
 both    spaces and line breaks
```

Global Attributes

This tag supports all the global attributes described in - **HTML Attribute Reference**
