The **java.lang.Character.Subset.toString** method returns the name of this subset.

Declaration

Following is the declaration for **java.lang.Character.Subset.toString** method

```
public final String toString()
```

Parameters

- NA

Return Value

This method returns a string representation of the object.

Exception

- NA

Example

The following example shows the usage of java.lang.Character.Subset.toString method.

```
package com.tutorialspoint;

import java.lang.*;

public class CharacterSubsetDemo extends Character.Subset {

    // constructor of super class
    CharacterSubsetDemo(String s) {
        super(s);
    }

    public static void main(String[] args){

        CharacterSubsetDemo str1 = new CharacterSubsetDemo("admin");
        CharacterSubsetDemo str2 = new CharacterSubsetDemo("webmaster");
        CharacterSubsetDemo str3 = new CharacterSubsetDemo("administrator");

        // returns a string representation of the object
        System.out.println("String1 = " + str1.toString());
        System.out.println("String2 = " + str2.toString());
        System.out.println("String3 = " + str3.toString());
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
String1 = admin
String2 = webmaster
String3 = administrator
```
