Copyright © tutorialspoint.com

Description

The **java.lang.Character.isJavaIdentifierPart** method determines if the specified character may be part of a Java identifier as other than the first character.

A character may be part of a Java identifier if any of the following are true:

- it is a letter
- it is a currency symbol *such as '\$'*
- it is a connecting punctuation character *such as '_'*
- it is a digit
- it is a numeric letter *such as a Roman numeral character*
- it is a combining mark
- it is a non-spacing mark
- `isIdentifierIgnorable` returns true for the character

Declaration

Following is the declaration for **java.lang.Character.isJavaIdentifierPart** method

```
public static boolean isJavaIdentifierPart(char ch)
```

Parameters

- **ch** - the character to be tested

Return Value

This method returns true if the character may be part of a Java identifier, false otherwise.

Exception

- NA

Example

The following example shows the usage of `lang.Character.isJavaIdentifierPart` method.

```
package com.tutorialspoint;

import java.lang.*;

public class CharacterDemo {

    public static void main(String[] args) {

        // create 2 char primitives ch1, ch2
        char ch1, ch2;

        // assign values to ch1, ch2
        ch1 = '3';
        ch2 = '/';

        // create 2 boolean primitives b1, b2
```

```

boolean b1, b2;

/**
 * check if ch1, ch2 can be part of java identifier
 * and assign results to b1, b2
 */
b1 = Character.isJavaIdentifierPart(ch1);
b2 = Character.isJavaIdentifierPart(ch2);

String str1 = ch1 + " may be part of a Java identifier is " + b1;
String str2 = ch2 + " may be part of a Java identifier is " + b2;

// print b1, b2 values
System.out.println( str1 );
System.out.println( str2 );
}
}

```

Let us compile and run the above program, this will produce the following result:

```

3 may be part of a Java identifier is true
/ may be part of a Java identifier is false

```
