The **java.lang.Double.longValue** method returns the value of this Double as a long *by casting to type long*.

Declaration

Following is the declaration for **java.lang.Double.longValue** method

```
public long longValue()
```

Parameters

- NA

Return Value

This method returns the double value represented by this object converted to type long.

Exception

- NA

Example

The following example shows the usage of java.lang.Double.longValue method.

```
package com.tutorialspoint;

import java.lang.*;

public class DoubleDemo {

    public static void main(String[] args) {

        /* returns the double value represented by this object
        converted to type long */
        Double obj = new Double("543267.90");
        long l = obj.longValue();
        System.out.println("Value = " + l);

        obj = new Double("30.0");
        l = obj.longValue();
        System.out.println("Value = " + l);
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
Value = 543267
Value = 30
```
