

JAVA.LANG.FLOAT.FLOATVALUE METHOD

http://www.tutorialspoint.com/java/lang/float_floatvalue.htm

Copyright © tutorialspoint.com

Description

The **java.lang.Float.floatValue** method returns the float value of this Float object.

Declaration

Following is the declaration for **java.lang.Float.floatValue** method

```
public float floatValue()
```

Parameters

- NA

Return Value

This method returns the float value represented by this object.

Exception

- NA

Example

The following example shows the usage of java.lang.Float.floatValue method.

```
package com.tutorialspoint;

import java.lang.*;

public class FloatDemo {

    public static void main(String[] args) {

        // returns the float value represented by this float object
        Float obj = new Float("19.36f");
        float f = obj.floatValue();
        System.out.println("Value = " + f);

        obj = new Float("2.00");
        f = obj.floatValue();
        System.out.println("Value = " + f);
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
Value = 19.36
Value = 2.0
```
