

JAVA.LANG.FLOAT.LONGVALUE METHOD

http://www.tutorialspoint.com/java/lang/float_longvalue.htm

Copyright © tutorialspoint.com

Description

The **java.lang.Float.longValue** method returns value of this Float as a long *by casting to type long*.

Declaration

Following is the declaration for **java.lang.Float.longValue** method

```
public long longValue()
```

Parameters

- NA

Return Value

This method returns the float value represented by this object converted to type long.

Exception

- NA

Example

The following example shows the usage of java.lang.Float.longValue method.

```
package com.tutorialspoint;

import java.lang.*;

public class FloatDemo {

    public static void main(String[] args) {

        /* returns the float value represented by this object
        converted to type long */
        Float obj = new Float("9873267.90");
        long l = obj.longValue();
        System.out.println("Value = " + l);

        obj = new Float("10.0");
        l = obj.longValue();
        System.out.println("Value = " + l);
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
Value = 9873268
Value = 10
```
