JAVA.LANG.FLOAT.TOSTRING METHOD

Description

The **java.lang.Float.toString** method returns a string representation of this Float object.

Declaration

Following is the declaration for **java.lang.Float.toString** method

```
public String toString()
```

Parameters

- **NA**

Return Value

This method returns a string representation of this object.

Exception

- **NA**

Example

The following example shows the usage of java.lang.Float.toString method.

```java
package com.tutorialspoint;

import java.lang.*;

public class FloatDemo {

   public static void main(String[] args) {

   Float f = new Float("30.54");

   // returns a string representation
   String retval = f.toString();
   System.out.println("Value = " + retval);
   }
}
```

Let us compile and run the above program, this will produce the following result:

```
Value = 30.54
```
