

JAVA.LANG.STACKTRACEELEMENT CLASS

http://www.tutorialspoint.com/java/lang/java_lang_stacktraceelement.htm

Copyright © tutorialspoint.com

Introduction

The **java.lang.StackTraceElement** class element represents a single stack frame. All stack frames except for the one at the top of the stack represent a method invocation. The frame at the top of the stack represents the execution point at which the stack trace was generated.

Class declaration

Following is the declaration for **java.lang.StackTraceElement** class:

```
public final class StackTraceElement
    extends Object
    implements Serializable
```

Class constructors

S.N. Constructor & Description

1 **StackTraceElement(String declaringClass, String methodName, String fileName, int lineNumber)**

This creates a stack trace element representing the specified execution point.

Class methods

S.N. Method & Description

1 [boolean equalsObject\(obj\)](#)

This method returns true if the specified object is another StackTraceElement instance representing the same execution point as this instance.

2 [String getClassName](#)

This method returns the fully qualified name of the class containing the execution point represented by this stack trace element.

3 [String getFileName](#)

This method returns the name of the source file containing the execution point represented by this stack trace element.

4 [int getLineNumber](#)

This method returns the line number of the source line containing the execution point represented by this stack trace element.

5 [String getMethodName](#)

This method returns the name of the method containing the execution point represented by this stack trace element.

6

[int hashCode](#)

This method returns a hash code value for this stack trace element.

7

[boolean isNativeMethod](#)

This method returns true if the method containing the execution point represented by this stack trace element is a native method.

8

[String toString](#)

This method returns a string representation of this stack trace element.

Methods inherited

This class inherits methods from the following classes:

• [java.lang.Object](#)
