

JAVA.LANG.LONG.EQUALS METHOD

http://www.tutorialspoint.com/java/lang/long_equals.htm

Copyright © tutorialspoint.com

Description

The **java.lang.Long.equals** method compares this object to the specified object. The result is true if and only if the argument is not null and is a Long object that contains the same long value as this object.

Declaration

Following is the declaration for **java.lang.Long.equals** method

```
public boolean equals(Object obj)
```

Parameters

- **obj** -- This is the object to compare with.

Return Value

This method returns true if the objects are the same, else false.

Exception

- NA

Example

The following example shows the usage of java.lang.Long.equals method.

```
package com.tutorialspoint;

import java.lang.*;

public class LongDemo {

    public static void main(String[] args) {

        Long obj1 = new Long(79845);
        Long obj2 = new Long(79800);
        System.out.print("Is obj1 and obj2 equal ? ");
        System.out.println(obj1.equals(obj2));

        obj1 = new Long(45469);
        obj2 = new Long(45469);
        System.out.print("Is obj1 and obj2 equal ? ");
        System.out.println(obj1.equals(obj2));
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
Is obj1 and obj2 equal ? false
Is obj1 and obj2 equal ? true
```
