

JAVA.LANG.LONG.VALUEOF METHOD

http://www.tutorialspoint.com/java/lang/long_valueof_string.htm

Copyright © tutorialspoint.com

Description

The **java.lang.Long.valueOfStrings** method returns a Long object holding the value of the specified String **s**.

Declaration

Following is the declaration for **java.lang.Long.valueOf** method

```
public static Long valueOf(String s) throws NumberFormatException
```

Parameters

- **s** -- This is the string to be parsed.

Return Value

This method returns a Long object holding the value represented by the string argument.

Exception

- **NumberFormatException** -- If the string cannot be parsed as a long.

Example

The following example shows the usage of java.lang.Long.valueOf method.

```
package com.tutorialspoint;

import java.lang.*;

public class LongDemo {

    public static void main(String[] args) {

        Long l = new Long(30);

        String str = "57695";
        // returns a Long instance representing the specified string
        System.out.println("Value = " + l.valueOf(str));
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
Value = 57695
```
