Example

The following example shows the usage of lang.Object.getImplementationTitle method.

```
package com.tutorialspoint;

public class PackageDemo {

    public static void main(String[] args) {

        // create a package object for java.lang package
        Package pack=Package.getPackage("java.lang");

        // get the annotation for lang package
        System.out.println(""+pack.getImplementationTitle());
    }
}
```

Let us compile and run the above program, this will produce the following result:
