

JAVA.LANG.PROCESSBUILDER.COMMAND METHOD

http://www.tutorialspoint.com/java/lang/processbuilder_command.htm

Copyright © tutorialspoint.com

Description

The **java.lang.ProcessBuilder.command** method returns this process builder's operating system program and arguments. The returned list is not a copy. Subsequent updates to the list will be reflected in the state of this process builder.

Declaration

Following is the declaration for **java.lang.ProcessBuilder.command** method

```
public List<String> command()
```

Parameters

- NA

Return Value

This method returns this process builder's program and its arguments

Exception

- NA

Example

The following example shows the usage of lang.ProcessBuilder.command method.

```
package com.tutorialspoint;

import java.util.ArrayList;
import java.util.List;

public class ProcessBuilderDemo {

    public static void main(String[] args) {

        // create a new list of arguments for our process
        List list = new ArrayList();
        list.add("notepad.exe");

        // create the process builder
        ProcessBuilder pb = new ProcessBuilder(list);

        // get the command list
        System.out.println(""+pb.command());

    }
}
```

Let us compile and run the above program, this will produce the following result:

```
[notepad.exe]
```
