```
package com.tutorialspoint;

import java.lang.*;

public class ShortDemo {

    public static void main(String[] args) {

        // create short object and assign value to it
        short s = 50;
        Short shortobj = new Short(s);

        // returning the value of short object as byte.
        byte bval = shortobj.byteValue();

        // print byte value
        System.out.println("byte value of Short object is : " + bval);
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
