```
public short shortValue()
```

Parameters

- NA

Return Value

This method returns the numeric value represented by this object after conversion to type short.

Exception

- NA

Example

The following example shows the usage of java.lang.Short.shortValue method.

```
package com.tutorialspoint;

import java.lang.*;

public class ShortDemo {

    public static void main(String[] args) {

        // create short object and assign value to it
        short sval = 50;
        Short sobj = new Short(sval);

        // returns short value of Short
        short shortValue = sobj.shortValue();

        // printing short value
        System.out.println("short value of given Short is = " + shortValue);
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
short value of given Short is = 50
