

STACKTRACEELEMENT.GETCLASSNAME METHOD

http://www.tutorialspoint.com/java/lang/stacktraceelement_getclassname.htm

Copyright © tutorialspoint.com

Description

The **java.lang.StackTraceElement.getClassName** method returns the fully qualified name of the class containing the execution point represented by this stack trace element.

Declaration

Following is the declaration for **java.lang.StackTraceElement.getClassName** method

```
public String getClassName()
```

Parameters

- NA

Return Value

This method returns the fully qualified name of the Class containing the execution point represented by this stack trace element.

Exception

- NA

Example

The following example shows the usage of **java.lang.StackTraceElement.getClassName** method.

```
package com.tutorialspoint;

import java.lang.*;

public class StackTraceElementDemo {

    public static void main(String[] args) {

        function1();
    }

    public static void function1()
    {
        new StackTraceElementDemo().function2();
    }

    public void function2()
    {
        System.out.print("class name : ");
        System.out.print(Thread.currentThread().getStackTrace()[1].
            getClassName());
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
class name : StackTraceElementDemo
Loading [MathJax]/jax/output/HTML-CSS/jax.js
```
