

JAVA.LANG.STRING.TOSTRING METHOD

http://www.tutorialspoint.com/java/lang/string_tostring.htm

Copyright © tutorialspoint.com

Description

The **java.lang.String.toString** method represent the result in textual format and returns the string itself.

Declaration

Following is the declaration for **java.lang.String.toString** method

```
public String toString()
```

Parameters

- NA

Return Value

This method returns the string itself.

Exception

- NA

Example

The following example shows the usage of java.lang.String.toString method.

```
package com.tutorialspoint;

import java.lang.*;

public class StringDemo {

    public static void main(String[] args) {

        // converts integer value in String representation
        int val1 = 325;
        String str1 = Integer.toString(val1);
        System.out.println("String representation of integer value = " + str1);

        // converts double value in String representation
        double val2 = 876.23;
        String str2 = Double.toString(val2);
        System.out.println("String representation of double value = " + str2);
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
String representation of integer value = 325
String representation of double value = 876.23
