

# JAVA.LANG.STRING.VALUEOF METHOD

[http://www.tutorialspoint.com/java/lang/string\\_valueof\\_boolean.htm](http://www.tutorialspoint.com/java/lang/string_valueof_boolean.htm)

Copyright © tutorialspoint.com

## Description

The **java.lang.String.valueOf** method returns the string representation of the **boolean** argument.

## Declaration

Following is the declaration for **java.lang.String.valueOf** method

```
public static String valueOf(boolean b)
```

## Parameters

- **b** -- This is a boolean value.

## Return Value

if the argument is true, a string equal to "true" is returned else, a string equal to "false" is returned.

## Exception

- NA

## Example

The following example shows the usage of java.lang.String.valueOf method.

```
package com.tutorialspoint;
import java.lang.*;
public class StringDemo {
    public static void main(String[] args) {
        String str1 = String.valueOf(true);
        String str2 = String.valueOf(false);

        // print the string representation of boolean
        System.out.println(str1);
        System.out.println(str2);
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
true
false
```
