

JAVA.LANG.STRINGBUFFER.INSERT METHOD

http://www.tutorialspoint.com/java/lang/stringbuffer_insert_subsequence.htm

Copyright © tutorialspoint.com

Description

The **java.lang.StringBuffer.insertintdstOffset, CharSequences, intstart, intend** method inserts a subsequence of the specified CharSequence into this sequence.

The subsequence of the argument **s** specified by **start** and **end** are inserted, in order, into this sequence at the specified destination offset, moving up any characters originally above that position. The length of this sequence is increased by **end - start**.

Declaration

Following is the declaration for **java.lang.StringBuffer.insert** method

```
public StringBuffer insert(int dstOffset, CharSequence s, int start, int end)
```

Parameters

- **dstOffset** -- This is the offset in this sequence.
- **s** -- This is the sequence to be inserted.
- **start** -- This is the starting index of the subsequence to be inserted.
- **end** -- This is the end index of the subsequence to be inserted.

Return Value

This method returns a reference to this object.

Exception

- **IndexOutOfBoundsException** -- if dstOffset is negative or greater than this.length, or start or end are negative, or start is greater than end or end is greater than s.length.

Example

The following example shows the usage of java.lang.StringBuffer.insert method.

```
package com.tutorialspoint;

import java.lang.*;

public class StringBufferDemo {

    public static void main(String[] args) {

        StringBuffer buff = new StringBuffer("tutorials");
        System.out.println("buffer = " + buff);

        CharSequence cSeq = "collection";
        /* insert CharSequence at offset 8 with start index 0 and
        end index 10 */
        buff.insert(8, cSeq, 0, 10);

        // prints stringbuffer after insertion
        System.out.print("After insertion = ");
        System.out.println(buff.toString());
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
buffer = tutorials  
After insertion = tutorialcollections  
Loading [Mathjax]/jax/output/HTML-CSS/jax.js
```
