

JAVA.LANG.STRINGBUILDER.APPENDCODEPOINT METHOD

http://www.tutorialspoint.com/java/lang/stringbuilder_appendcodepoint.htm

Copyright © tutorialspoint.com

Description

The **java.lang.StringBuilder.appendCodePoint***intcodePoint* method appends the string representation of the **codePoint** argument to this sequence. The argument is appended to the contents of this sequence.

Declaration

Following is the declaration for **java.lang.StringBuilder.appendCodePoint** method

```
public StringBuilder appendCodePoint(int codePoint)
```

Parameters

- **codePoint** -- This is the Unicode code point.

Return Value

This method returns a reference to this object.

Exception

- NA

Example

The following example shows the usage of java.lang.StringBuilder.appendCodePoint method.

```
package com.tutorialspoint;

import java.lang.*;

public class StringBuilderDemo {

    public static void main(String[] args) {

        StringBuilder str = new StringBuilder("programming");
        System.out.println("string = " + str);

        // appends the CodePoint as string to the StringBuilder
        str.appendCodePoint(74);

        // print the StringBuilder after appendingCodePoint 74
        System.out.println("After appendCodePoint = " + str);
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
string = programming
After appendCodePoint = programming1
