

JAVA.LANG.STRINGBUILDER.LENGTH METHOD

http://www.tutorialspoint.com/java/lang/stringbuilder_length.htm

Copyright © tutorialspoint.com

Description

The **java.lang.StringBuilder.length** method returns the length *charactercount*.

Declaration

Following is the declaration for **java.lang.StringBuilder.length** method

```
public int length()
```

Parameters

- NA

Return Value

This method returns the length of the sequence of characters currently represented by this object.

Exception

- NA

Example

The following example shows the usage of java.lang.StringBuilder.length method.

```
package com.tutorialspoint;

import java.lang.*;

public class StringBuilderDemo {

    public static void main(String[] args) {

        StringBuilder str = new StringBuilder("admin");
        // prints the length of StringBuilder
        System.out.println("length = " + str.length());

        str = new StringBuilder("");
        // prints the length of empty StringBuider
        System.out.println("length = " + str.length());
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
length = 5
length = 0
```
