The **java.lang.ThreadLocal.get** method returns the value in the current thread's copy of this thread-local variable.

Declaration

Following is the declaration for **java.lang.ThreadLocal.get** method

```
public T get()
```

Parameters

- NA

Return Value

This method returns the current thread's value of this thread-local.

Exception

- NA

Example

The following example shows the usage of java.lang.ThreadLocal.get method.

```
package com.tutorialspoint;

import java.lang.*;

public class ThreadLocalDemo {

    public static void main(String[] args) {

        ThreadLocal<Integer> tlocal = new ThreadLocal<Integer>();

        tlocal.set(100);
        // returns the current thread's value
        System.out.println("value = " + tlocal.get());

        tlocal.set(90);
        // returns the current thread's value of
        System.out.println("value = " + tlocal.get());

    }
}
```

Let us compile and run the above program, this will produce the following result:

```
value = 100
value = 90
```
