The method returns the first day of the week.

Exception

- NA

Example

The following example shows the usage of **java.util.calendar.getFirstDayOfWeek** method.

```
package com.tutorialspoint;

import java.util.*;

public class CalendarDemo {

    public static void main(String[] args) {

        // create a new calendar
        Calendar cal = Calendar.getInstance();

        // print the first day of the week
        System.out.println("First day is : " + cal.getFirstDayOfWeek());
        int day = cal.getFirstDayOfWeek();
        switch (day) {
            case (1):
                System.out.println("Sunday");
                break;
            case (2):
                System.out.println("Monday");
                break;
            case 3:
                System.out.println("Tuesday");
                break;
            case 4:
                System.out.println("Wednesday");
                break;
            case 5:
                System.out.println("Thrusday");
                break;
            case 6:
                System.out.println("Friday");
                break;
            case 7:
                System.out.println("Saturday");
```

```
break;  
}  
}  
}
```

Let us compile and run the above program, this will produce the following result:

```
First day is :2  
Monday
```
