Copyright © tutorialspoint.com

Description

The **java.util.Calendar.set**(int, int, int, int, int) method sets the values for the calendar fields **YEAR**, **MONTH**, **DAY_OF_MONTH**, **HOURL_OF_DAY** and **MINUTE**.

Declaration

Following is the declaration for **java.util.Calendar.set** method

```
public final void set(int year, int month, int day, int hourOfDay, int minute)
```

Parameters

- **year** -- Value to be used for YEAR field
- **month** -- Value to be used for MONTH field. 0 is January
- **day** -- Value to be used for DAY field
- **hourOfDay** -- Value to be used for HOUR_OF_DAY field
- **minute** -- Value to be used for MINUTE field

Return Value

This method does not return a value.

Exception

- NA

Example

The following example shows the usage of java.util.calendar.set method.

```
package com.tutorialspoint;

import java.util.Calendar;

public class CalendarDemo {

    public static void main(String[] args) {

        // create a calendar
        Calendar cal = Calendar.getInstance();

        // print current time
        System.out.println("Current year is :" + cal.getTime());

        // set the year, month and day to something else
        cal.set(1995, 5, 25, 04, 15);

        // print the result
        System.out.println("Altered year is :" + cal.getTime());
    }
}
```

Let us compile and run the above program, this will produce the following result:

```
Current year is :Wed May 02 19:14:41 EEST 2012
```

Altered year is :Sun Jun 25 04:15:41 EEST 1995
